FORMULA

Basic Formulas

FORMULAS

Excel

How to Enter a formula

- ▶ Click cell where you want formula results to appear
- ▶ Type = and an expression that calculates a value using cell references and arithmetic operators
- ▶ Cell references allow you to change values used in the calculation without having to modify the formula itself
- ▶ Press Enter or Tab to complete the formula

FORMULAS

Excel

Operation	Arithmetic Operator	Example	Description
Addition	+	=10+A1	Adds 10 to the value in cell A1
		=B1+B2+B3	Adds the values in cells B1, B2, and B3
Subtraction	-	=C9-B2	Subtracts the value in cell B2 from the value in cell C9
		=1-D2	Subtracts the value in cell D2 from 1
Multiplication	*	=C9*B9	Multiplies the values in cells C9 and B9
		=E5*0.06	Multiplies the value in cell E5 by 0.06
Division	/	=C9/B9	Divides the value in cell C9 by the value in cell B9
		=D15/12	Divides the value in cell D15 by 12
Exponentiation	^	=B5^3	Raises the value of cell B5 to the third power
		=3^B5	Raises 3 to the value in cell B5

Formula	Application of the Order of Precedence	Result
=50+10*5	10*5 calculated first and then 50 is added	100
=(50+10)*5	(50+10) calculated first and then multiplied by 5	300
=50/10-5	50/10 calculated first and then 5 is subtracted	0
=50/(10-5)	(10-5) calculated first and then 50 is divided by that value	10
=50/10*5	Two operators at same precedence level, so the calculation is done left to right in the expression	25
=50/(10*5)	(10*5) calculated first and then 50 is divided by that value	1

FORMULAS

- ▶ Sum of values in column or row =**SUM**(cells/range)
- ▶ Average value in column or row =**AVERAGE**(cells/range)
- ▶ Minimum / Lowest value in column or row =**MIN**(cells/range)
- ▶ Maximum / Highest value in column or row =**MAX**(cells/range)
- ▶ Ranks for range or in column or row =**RANK**(value, cells/range)
- ▶ Total count of numeric values in column or row =**COUNT**(range)
- ▶ Total count of fill with values in column or row =**COUNTA**(range)

FORMULAS

Excel

► Relative and Absolute Cell References

- **A relative cell reference** adjusts to its new location when copied or moved to another cell. Relative cell references are the default in Excel.

Example: the formula '=B2+C2+D2' in E1 was copied to the cells below. The cell reference changes to match each row number.

- **An Absolute cell reference** contains a dollar sign (\$) before the column letter, row number or both. Coordinates preceded by the dollar sign (\$) do not change when copied or moved to a new cell.

In this example, \$A\$12 is an absolute cell reference. When the formula was copied from E2 to the cells below, that reference did not change.

- ▶ Custom

Excel

CUSTOM NUMBER FORMATTING

Excel

Character	Purpose
0	Display insignificant zeros
#	Display significant digits
?	Display aligned decimals
.	Decimal point
,	Thousands separator
*	Repeat digit
_	Add space

CUSTOM NUMBER FORMATTING

Excel

1,23,45,678.00	#,##0.00
00012345678	"000"#
5.25	#.0#
5 1/4	# ???/??? (fractions)
12,000	[blue]#,###
(-12,000)	[Blue]#,###;[Red](-#,###)
0	[Blue]#,###;[Red](-#,###);[Yellow]#,###0
12K	#,K To display a comma as a thousands separator
12.5	#,, Convert No 12500000
12.2	0.0,, Format into 12200000
1234-5678-9012	####-####-#### for Aadhar No Display
TEJASH-TEJASH	@-@ Repeat the same text of cell
+91-98205 62897	+##-### #### ## 919820562897
Colours: [Black] [Blue] [Cyan] [Green] [Magenta] [Red] [White] [Yellow]	

CONDITIONAL FORMATTING

Excel

- ▶ Conditional formatting in Excel is a tool that allows you to change the appearance of a cell or range of cells based on the contents of the cells.
- ▶ There are several types of conditional formatting rules built in to Excel and many more options available through customization.
- ▶ Choose one of the built in rules or choose 'More Rules' for customizable options
- ▶ Great for finding zero values, values outside normal ranges, negative values, duplicates, and other specific amounts
- ▶ Also can be used for finding dates and text values

CONDITIONAL FORMATTING

Excel

Conditional Formatting | Format as Table | 40% - Accent... | 60% - Accent... | MyBlue | Normal 2 | No

- Highlight Cells Rules
 - Greater Than...
- Top/Bottom Rules
 - Less Than...
- Data Bars
 - Between...
- Color Scales
 - Equal To...
- Icon Sets
 - Text that Contains...
 - A Date Occurring...
 - Duplicate Values...
- New Rule...
- Clear Rules
- Manage Rules...

More Rules...

4		89,450
16		71,300
17		45,000

Conditional Formatting | Format as Table | 40% - Accent... | 60% - Accent... | MyBlue | Normal 2 | N

- Highlight Cells Rules

Sheet Name: ConditionalFormatting

CONDITIONAL FORMATTING

- ▶ Greater / Equal / Less Than Data
- ▶ Text Content
- ▶ Top 10 / Bottom 10 / Average 10
- ▶ DATA BAR
 - ▶ Hide the Data Value

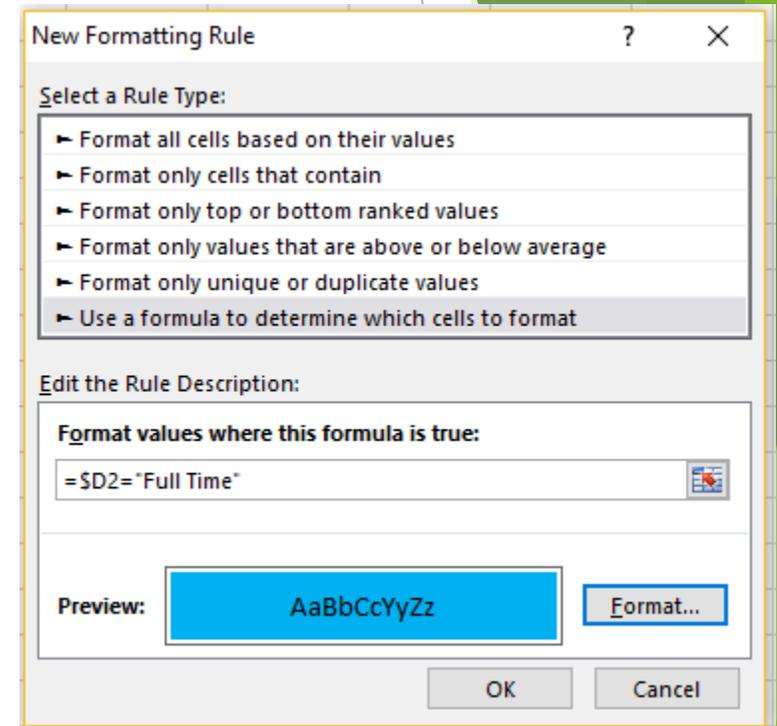

Excel

CONDITIONAL FORMATTING

Excel

- ▶ To Select Entire Row
 - ▶ For our example sheet. We only want to Highlight ROW who is working FULL TIME from our records
 - ▶ Select the all range of Data (A2:I592)
 - ▶ Click on Conditional Formatting and New Rule
 - ▶ `= $D2="Full Time"` (`$D2`, Like Column `$D` is absolute and Row is Relative)
 - ▶ So Formula can check all rows
